### CISCO

## CAREER OBJECTIVE

Software developer with experience working across the full-stack of software development. I have built multiple projects with OutSystems with big and small teams and I am looking for a role where I can grow and continue to improve.

## WORK EXPERIENCE

### OutSystems Developer

#### NTT Data

📅 2021 - 2022

📍 Remote

- Designed and coded logic flows for OutSystems projects.
- Troubleshot code-related issues and defects on pre-existing projects.
- Produced detailed design documentation, unit test plans, and documented code for different international projects.
- Designed interfaces for OutSystems projects in Traditional and Reactive style.
- Created custom functions in JS to avoid OutSystems limitations.
- Designed interfaces in Figma.

### Outsystems Developer

#### Fujitsu

📅 2022 - current

📍 Remote

- Delivered 3 different applications made in OutSystems.
- Worked on a team that developed an enterprise-grade application using the OutSystems platform, touching all layers from data modeling and integrations to business logic and UI
- Document, implement, test, and debug features (SDLC)
- Build and integrate with internal and external APIs
- Analyze user requirements and create relevant user stories and specifications for development

## PROJECTS

### FIDELIDADE

#### Developer

- Built a traditional web app using OutSystems and Oracle that allowed users to manage insurance claims across multiple countries.
- Created custom themes for the Organisation using CSS
- Fixed security risks across all the applications of the company

### EDP

#### Developer

- 
- Delivered a Traditional web OutSystems application.

## Certification

AZ-900 - Azure Fundamentals

**MICROSOFT**

## SKILLS

- OutSystems
- JavaScript
- HTML/ CSS
- SQL
- REST APIs
- Java
- .Net

## Languages

- English (Fluent)
- Spanish (Native)

- Created documentation used as reference on other projects of the company.
- Fixed data model inconsistencies across the application.
- Developed interface layouts and fixing style-related inconsistencies.

## PROGEST

### Developer

- Delivered a Traditional web OutSystems app.
- Analysis and improvement of the data model of the application.
- Creating and fixing SQL queries needed for the application.
- Standardize the application layout.

## Atamai Freight (Fujitsu)

- Works with other team members to produce a solution that meets architectural guidelines and Definition of Done per stated acceptance criteria
- Responsible to develop continuous integration automation
- Use Developer studio and Integration studio to develop back-end as well as front-end executable code, including but not limited to user-facing features in OutSystems adhering to the acceptance criteria
